

One package - many options!

The alphatronics MOBILE CONNECTION package not only opens the world to the mobile Internet for you. With the multifunctional antenna you receive not only WLAN and LTE but also DAB +, GPS and GLONASS.

The innovative multifunctional antenna!

LTE (MIMO Diversity), WIFI, DAB +, GPS, GLONASS

Automotive certified LTE / WLAN router

Easy and quick access to the mobile internet - this was the aim of the alphatronics developers. The result is a powerful combination of a multifunctional antenna, an automotive-certified router and the alphatronics web app for easy setup, operation and management of your personal networks.

High-performance multifunctional antenna

The antenna has two isolated high-performance antennas (MIMO) for LTE reception and another for WIFI reception. The one for use in the motor-home development router is connected to two SIM card slots. For example, you can use the second card of your mobile phone contract or a prepaid card as well. The optimal coordination connection between the external antenna and router enables interference-related internet reception in the vehicle. You can use your own network in the vehicle and use the streaming offers of alphatronics smart TV. Of course, you can also capture an existing WIFI signal, in this case the router belongs as a repeater in the vehicle interior.

A highlight of interest is the roof antenna via an active DAB + antenna and an active GPS / GLONASS antenna. The all-in-one package leaves nothing to be desired and ensures the best reception on your vacation trip, no matter what you want to receive!

Model	alphatronics MOBILE CONNECTION PACKAGE
Antenna type	MIMO-Diversity
Antennena connections	2x LTE
	1x WIFI
	1x DAB+
